Consider the `game_goalie_stats.csv` data file posted on Blackboard. This file contains goalie stats from different teams. In **Python**, answer the following:

1. (5 points) Using the pandas library, read the csv data file and create a data-frame called `goalie_stats`.

2. (3 points) Print the first and last three observation of the data-frame.

3. (4 points) Report the number of goalies in the data-frame.

4. (4 points) Report the number of goalies with `savePercentage > 95%`.
